

# The Water Manifesto - Sustainable management of water resources in Apulia and scenarios of cooperation and development

## CHALLENGE

The working table dedicated to the theme of sustainable management of water resources in Apulia with a vision to the Mediterranean countries, had as its primary objective the **comprehensive and integrated analysis** of the technical aspects related to the sustainable management of water resources, from multiple perspectives, thanks to the involvement of different public and private institutions.

## KEY ACTIVITIES / ACHIEVEMENTS

The technical table on Apulia's water supply system provided a detailed overview of the **challenges** and **opportunities** currently shaping the region's water sector. Through an in-depth analysis of the key points that emerged during the meeting, it is possible to outline key conclusions that guide the next **actions and strategies** in the Apulian water sector. Several crucial points emerged that highlight both the current resilience of the system and the challenges that need to be addressed to ensure the safety and quality of water supply in the region.
