

Training session on the principles of the Circular Economy

CHALLENGE

Organise a training session with **IES Abroad** to introduce students to a sustainable and innovative approach. The main objective is to make participants understand the importance of a **circular economic model** compared to traditional ones, providing a theoretical basis and practical applications of this approach.

KEY ACTIVITIES / ACHIEVEMENTS

During the session, the core elements of the Circular Economy were presented, demonstrating how this approach is essential for achieving the **goal of zero CO₂ emissions** and introducing the EU's sustainability strategy through the Action Plan adopted by the European Commission. Concrete examples were provided through the showcase of Tondo and its various projects in this field to promote the Circular Economy. The students gained a greater awareness of the importance of the Circular Economy and a **deeper understanding** of its practical applications, preparing them to promote sustainable economic models in their future professional careers.
