

Coordination of international research assemblies

CHALLENGE

The main challenge involved coordinating an **international institutional meeting** dedicated to scientific research and **environmental innovation** projects. The goal was to ensure top-tier hospitality for delegates from diverse backgrounds, managing the complexity of a multi-day event where technical discussions had to seamlessly integrate with networking opportunities and the discovery of local cultural heritage.

KEY ACTIVITIES/ACHIEVEMENTS

The initiative involved full oversight of a two-day assembly, including logistics management and constant supervision to ensure a smooth agenda. **Hospitality** and **catering services** were curated with menus based on local products, alongside the production of promotional and **informational materials** for participants. The program was enhanced with experiential activities, such as technical and cultural guided tours, which fostered dialogue among participants. The result was a high-profile professional event that successfully strengthened relationships within an international network of innovators.
